1. Title of your project

Title: Automatic Security System

2. Team Name:

Team name: Mvidia (Tom Chen, Jake Yurasko)

3. Who are the stakeholder/s
- Home owner/resident
- Law enforcement
- Property owner

4. 1-sentence value statement

Our security system helps property owners by providing an automatic security device so they can have increased safety.

5. Brief 1-paragraph summary of your project.

Our project is an automatic property security system designed to detect when someone enters an unwanted area. The device uses a pyro electric motion sensor to detect when someone gets in a certain range. Once they are detected, the device will change from a green LED to yellow LED to warn someone who knows they can turn it off before it goes off. The specified time will be shown on an LCD screen and count down. Once the time hits zero, the system will flash a red LED and activate a passive buzzer to alert people around and security. This project aims to improve security and help prevent intrusions by alerting others when there's an unwanted person in the area.

6. List of part/s you plan to use

3x LEDs - red, yellow, green
Resistors
Pyro electric motion sensor
Wires
Breadboard
Passive buzzer
LCD screen.
